

# Actions for Clean Water

Sacramento needs your help to prevent pollution at its source

## 1. PESTICIDES

Try using less-toxic or non-toxic pesticides or practice other methods of Integrated Pest Management (IPM). To learn more, visit our website.

## 2. LITTER

Properly disposing your rubbish in the right bins helps prevent litter from entering our local waterways. When traveling don't forget to tarp your load.

## 3. MOTOR OIL

When you discover you have an oil leak, get it fixed right away. In the meantime, put an oil pan with kitty litter under your car to absorb any drips.

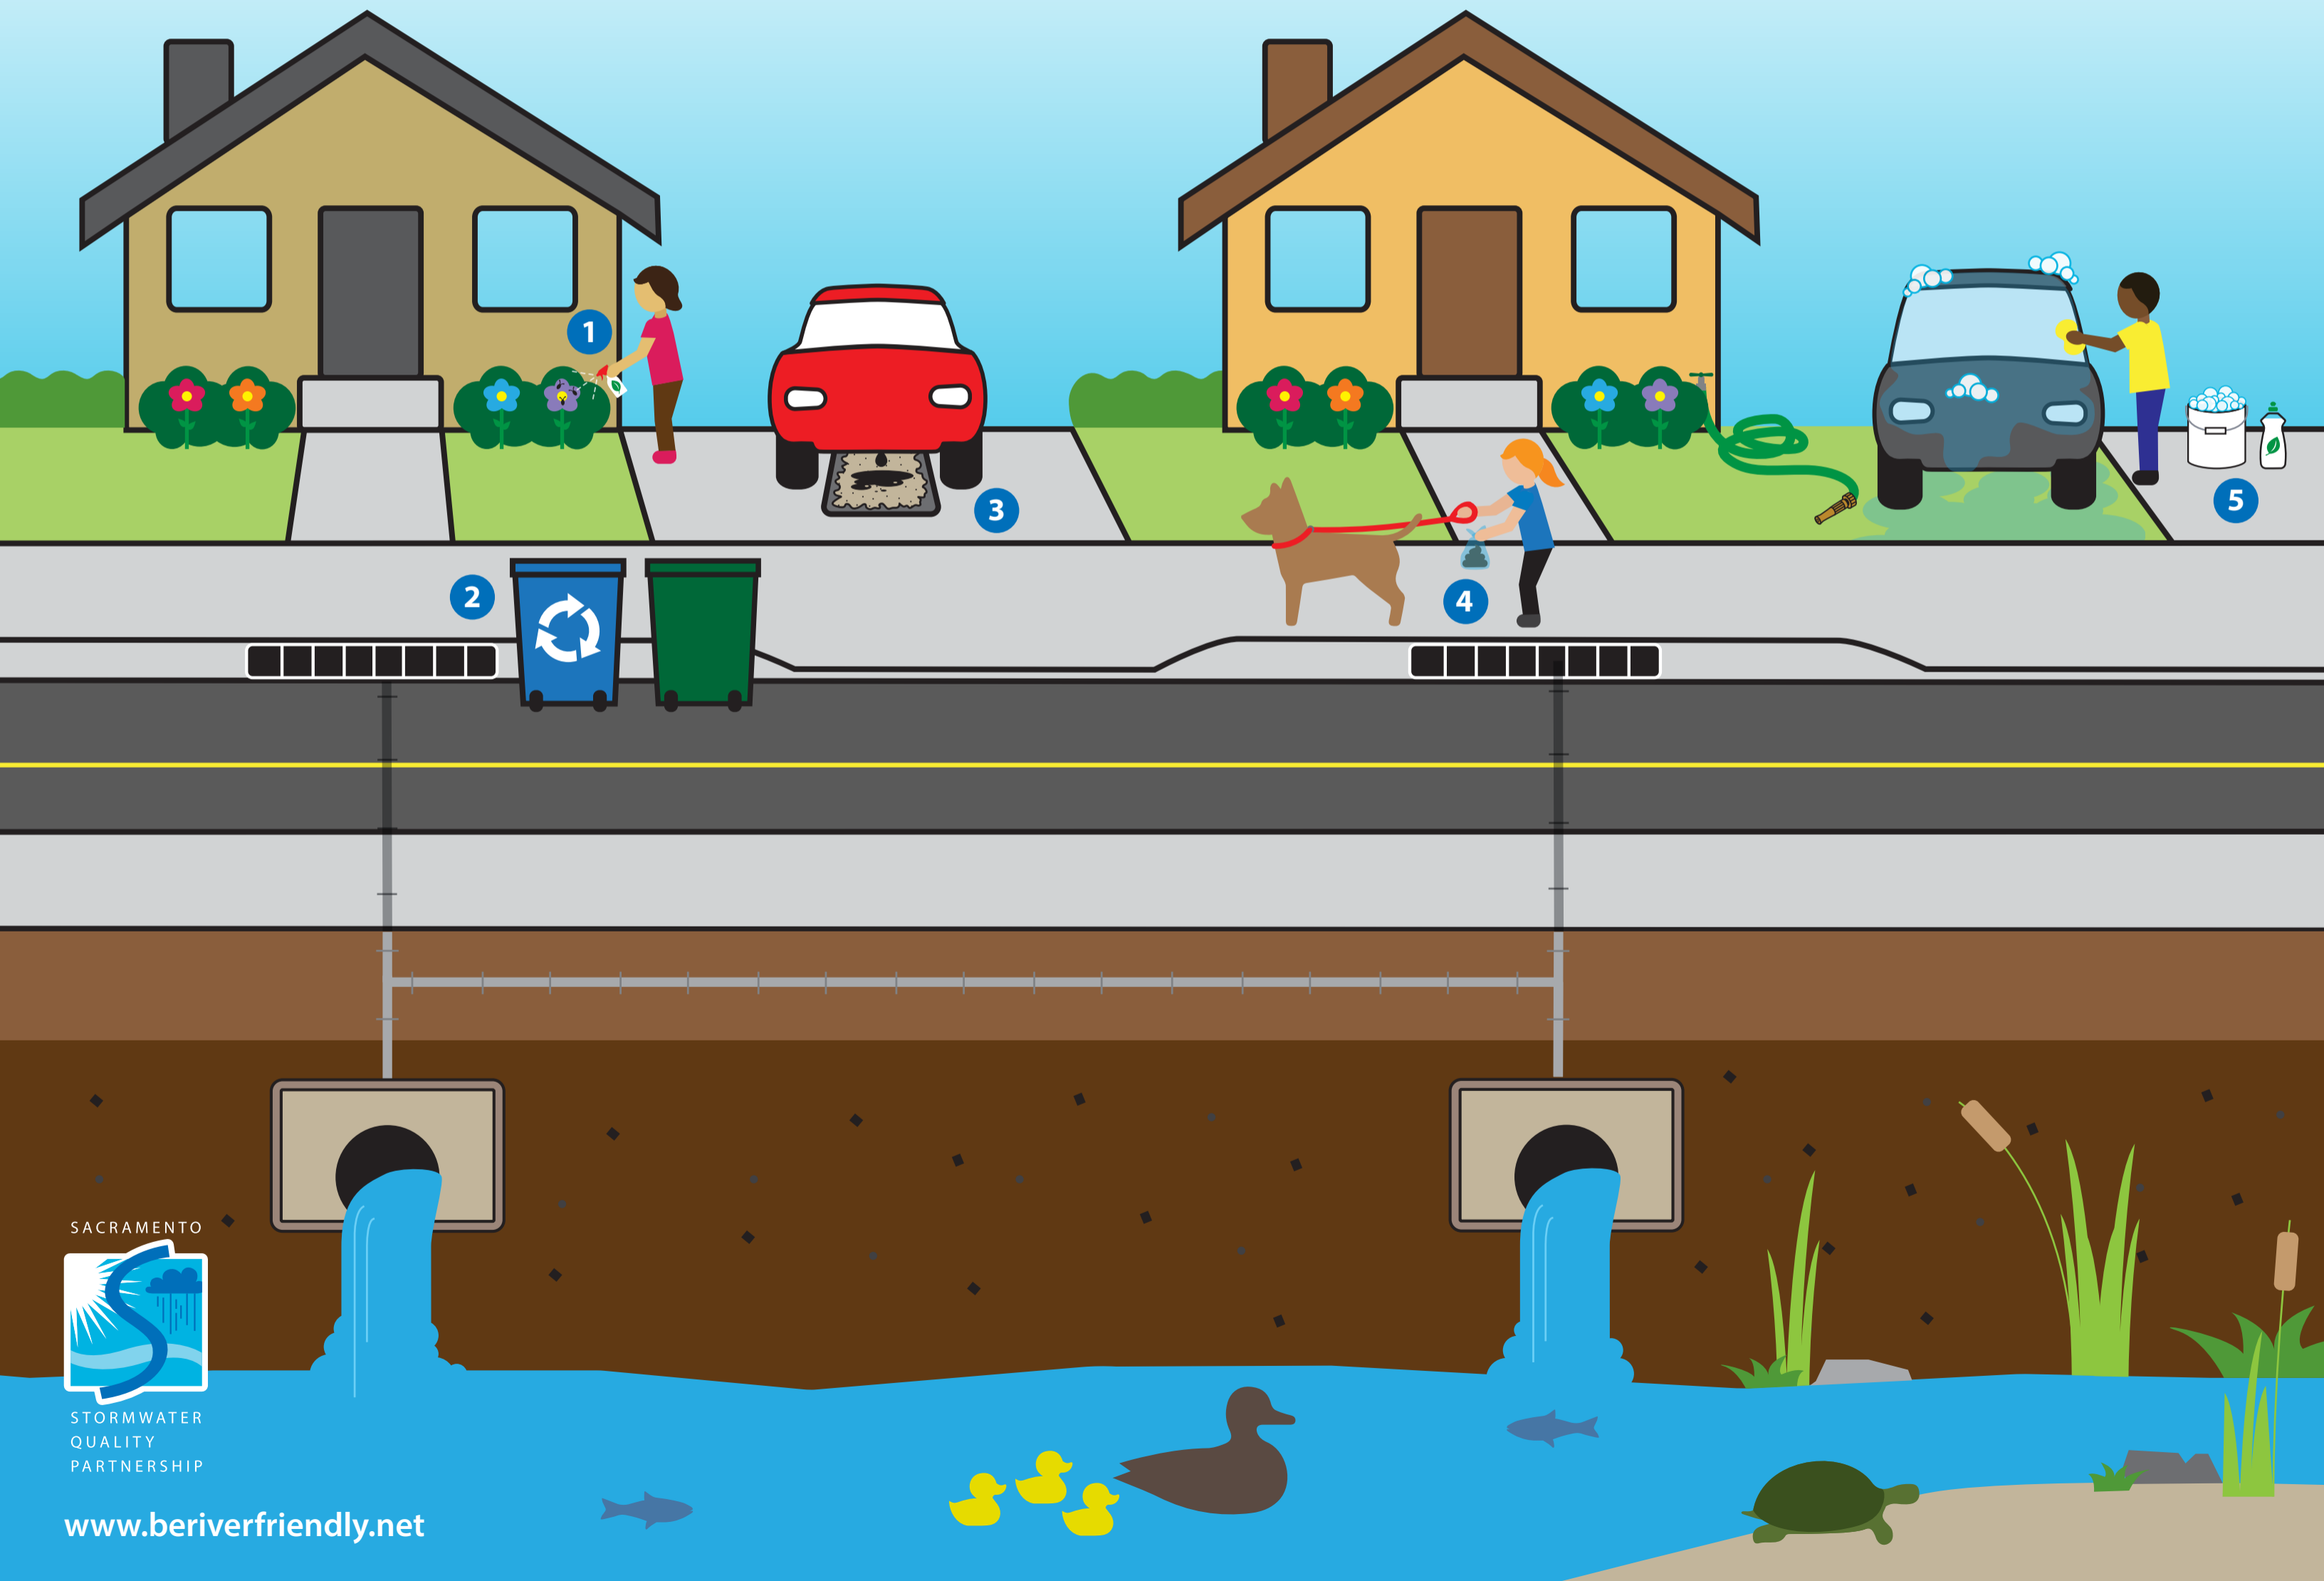

## 4. PET WASTE

Scoop the poop, bag it up, and toss it in the trash can. When you walk your pet, bring a pet waste bag!

## 5. SOAPS/DETERGENTS (from car wash)

If you wash your car at home, use a hose nozzle, check-out biodegradable soap made specifically for automotive parts, and move the car to your lawn to capture and filter the runoff.
